

TotalVCS is an integrated component of SumTotal Systems' blended learning environment that enables real time and "on demand" communication, collaboration and learning over the web. TotalVCS eliminates the time and expense of travel, bringing geographically dispersed employees, customers, and partners together anytime, anywhere.

Reduce the costs associated with face-to-face learning events

- Deliver recorded, online learning events on demand for future learning activities or knowledge sharing
- Provide global access, anywhere, anytime for instructors and participants
- Automatically synchronize internal employee, organization structure and job data into TotalLMS on a periodic basis
- Migrate data from one or more legacy learning data sources into TotalLMS

Flexible deployment models including support for common vendors

- Secure, behind-the-firewall deployment for a highly protected online learning environment
- Support for a hosted or on-premise solution
- Out-of-box integration with leading virtual classroom providers including WebEx™, Interwise® Adobe® Acrobat® Connect™ Professional and Centra®.
- No IT involvement required for deployment

Supports instructor-led training capabilities

- Collaborative environment for highly interactive, instructor-led training sessions
- Support for multiple delivery modes that offer mentoring activities, small group meetings or seminars
- Live and recorded events are created, managed, tracked and launched by TotalLMS™

Seamless integration with learning management workflow and functionality

- Central management and tracking of class rosters, participation levels, instructors, event leaders and scores
- Create and schedule online training sessions like instructor-led training events with the ability to assign multiple instructors and assign as-required learning activities
- Incorporate into blended learning scenarios
- Complete tracking of results and assessments
